

# Capacitors are supplied by manufacturers with good quality

## Overview

In the case of polymer caps, all types are considered good for PSU usage due to their ability to withstand higher operating temperatures than their electrolytic counterparts. When it comes to electrolytic caps, sinc. Even the Japanese manufacturers include some mainstream lines in their portfolios, which aren't as good as their top-of-the-line products. So, in addition to the brand, we always take a clo. On this list you will find capacitors made by some of the Taiwanese manufacturers, which often use factories in China. These caps perform well, so they are usually used in mid-level PSU. These third-tier capacitors, according to information from various PSU manufacturers and people with knowledge of RMA statistics, along with our own experiences with. This group includes the rest of the capacitor brands. When you see one of these brands in a contemporary PSU, you'll know that the manufacturer set lower-cost production as a priority instead.

What's the difference between "good" and "bad" quality capacitors?

It's simple: good-quality caps have datasheets and specs you can depend on (expected lifetime at temperature, ESR, ripple current, etc.). Crap-quality caps: good luck with that. That's also why it's important to buy from reputable dealers: sometimes, you can even get counterfeit (or "slightly" used) brand-name caps!
