This article examines empirica. ••We study how RE promotion policies impact exports of wind and sol. The concept of green growth is increasingly gaining momentum in policy and academic circles. The green growth concept can be said to turn the debate on costly environmental co. 2.1. Gravity modelThe gravity model of trade is the «workhorse» of the applied international trade literature [42,43], used in thousands of studies, mostl. Results of the model in reduced form are displayed in Table 1. An advantage of the gravity model is that the values of its coefficients are easy to interpret: they correspond to ela. Our econometric model shows evidence of a positive effect of policies that promote the use of renewable energy on the export performance and competitive advantage of renewable energy.
