

Investment in enterprise power storage batteries

Overview

Battery storage projects (typically 4-hour lithium-ion systems) generate 8-12% IRRs through capacity payments (grid stability services) and energy arbitrage (buy cheap, sell expensive). Market size: \$30B annual battery storage investment (2024), projected \$100B+ by 2030. Private equity and venture capital investments in the battery energy storage system, energy management and energy storage sector so far in 2024 have exceeded 2023's levels and are on pace to reach one of the highest annual totals in five years. Leading developers: NextEra, offering multiple grid services as renewable energy penetration grows. Business models like tolling, regulated cost recovery, and merchant electricity demand, grid constraints, and retiring thermal generation. 8 billion across 56 deals in the first nine months of 2025. The sector attracted serious money because the Inflation Reduction Act made standalone storage projects viable with investment tax credits. The US. As investment in energy infrastructure continues to grow, PE firms are turning to large-scale battery storage to solve the issue of storing intermittent energy sources.
