

Single-phase inverter hardware cost

Overview

Estimated ranges for residential solar inverter replacement span from about \$1,250 to \$6,100, depending on inverter type and installation complexity. A typical 5–8 kW system replacement leans toward \$2,500–\$4,500 in total, with the inverter unit representing a sizable portion. Premium Technology Justifies Higher Costs: While SolarEdge systems cost 20–35% more than basic string inverters (\$5,500–\$9,000 vs \$3,000–\$5,000 for residential installations), the module-level optimization delivers 15–25% higher energy production, typically paying for the premium within 2–3 years. Single-phase inverters convert DC power from solar panels into AC electricity compatible with standard residential electrical services, representing the backbone of nearly all U.S.
